### **RAIN CARBON INC - HURRICANE / TROPICAL STORM UPDATE**

**Stamford, CT** – September 12, 2017 – Rain Carbon Inc. (“**RCI**”) did not have any assets or employees in the path of Hurricane Irma, nor do we expect any lingering effects from this weather event. We foresee no material impact on any suppliers, customers, product sales, or normal distribution routes, due to this latest storm.

As previously advised, the energy cogeneration section at our Lake Charles plant was effected by a distribution grid interruption on August 27 during Hurricane Harvey, which caused our turbine generator to trip. After comprehensive evaluation of the situation with technical experts, it seems there was water intrusion in some key equipment which will require repair prior to restarting the turbine generator. As a result, we anticipate losing a total of 45 days of energy revenue due to this unfortunate event.

The Lake Charles calcination section has continued to operate at reduced rates since the energy section incident, and will remain on reduced volumes until the energy section restarts in October. We are adjusting some of the planned turnarounds at our other facilities to ensure sufficient production is available for customer commitments moving forward. Despite this interruption, we do not believe it will have a material impact on the company’s performance in September or October 2017.

About Rain Carbon Inc.:

Rain Carbon Inc. is a leading vertically integrated global producer of a diversified portfolio of carbon-based and chemical products that are essential raw materials for staples of everyday life. We operate in two business segments: carbon and chemicals. Our carbon business segment converts the by-products of oil refining and steel production into high value carbon-based products that are critical raw materials for the aluminum, graphite, carbon black, wood preservation, titanium dioxide, refractory and several other global industries. Our chemicals business segment extends the value chain of our carbon processing through the downstream refining of a portion of this output into high value chemical products that are critical raw materials for the specialty chemicals, coatings, construction, petroleum and several other global industries. For more information please visit Rain Carbon Inc's website, [www.raincarbon.com](http://www.raincarbon.com).
